Phil,
Good Morning!

Gary Moore and I have been discussing the treatment standards that will apply (in addition to the report requirements that have been identified in Satya's memo in the TCEQ's Dec 20, 2011 Approval Letter) for the treated wastewaters from Tank 26 at the Falcon Refinery. Please find attached a copy of the universal treatment standards for wastewater and the results of analysis for water from Tanks 26, 10, 30 and 7.

If you are available, I will contact you later this morning to discuss TCEQ Superfund's reporting requirements and discharge limits.

Alonzo G. Arredondo
Senior Geologist
TRC Environmental Corp.

Alonzo:

I scanned the results and noticed that one of the samples showed a benzene level of 2500 ug/l. or 2.5 mg/l. Therefore, it would appear to me that the water within the tank would be considered a D018 (Benzene). This is a characteristic waste and therefore the discharge limitations for land application must be less than the levels established for all the constituents listed at 268.48. Please review my analysis and let's discuss.

Thanks

Gary Moore

Gary,

As you requested, please find attached the analysis of water from Tank 26.
